Patent No. US2002052308A1

GENERAL INFORMATION:

APPLICANT: ROSen et al.

TITLE OF INVENTION: Nucleic Acids, Proteins and Antibodies
FILE REFERENCE: PA106

CURRENT APPLICATION NUMBER: US/09/925,301

CURRENT FILING DATE: 2000-03-08

PRIOR PILING DATE: 2000-03-08

PRIOR FILING DATE: 1999-03-12

NUMBER OF SEQ ID NOS: 1694

SOFTWARE: PATENTIN VOY: 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               48.3%; Score 56; DB 14; Length 282; ilarity 55.0%; Pred. No. 4.3; Conservative 3; Mismatches 4; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 56, DB 9; Length 339;

Sequence 131, Application US/08642255
; Patent No. 577249
; GENERAL INFORMATION:
; APPLICANT: CAPPELLO, Joseph
; APPLICANT: PERRARI, Franco A.; TITLE OF INVENTION: High Molecular Weight Collagen-Like; TITLE OF INVENTION: Protein Polymers
; CORRESPONDENCE ADDRESS:
; CORRESPONDENCE ADDRESS:
; ADDRESSEE: FLERR, HOHBACH, TEST, ALBRITTON & HERBERT; CAREET: 4 Embarcadero Center, Suite 3400
; CITY: San Francisco
; STATE: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DB 1; Length 75;
COMPUTER RADABLE FORM:

MEDIUM TYPE: Floppy disk

Sequence 1, Application US/08748150

Patent No. 5919754

GENERAL INFORMATION:

APPLICANT: Altieri, Dario C

APPLICANT: Thornton, George B

TITLE OF INVENTION: ENDOTHELIAL CELL AND FIBRINOGEN MEDIATED INFLAMMATION

NUMBER OF SEQUENCES: 5

CORRESPONDENCE ADDRESS:

ADDRESSEE: The SCIIDER Research Institute, Office of

ADDRESSEE: Patent Counsel

STREET: 10666 No. 5919754th Torrey Pines Road, TPC 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gapa

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 1, Application US/08232532
Sequence 1, Application US/08232532
Patent No. 559730
GENERAL INFORMATION:
APPLICANT: Altieri, Dario C
APPLICANT: Thornton, George B
TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR INHIBITING
TITLE OF INVENTION: ENDOTHELIAL CELL AND FIBRINGGEN MEDIATED INFLAMMATION
NUMBER OF SEQUENCES: 5
CORRESPONDENCE ADDRESS:
ADDRESSEE: The Scripps Research Institute, Office of
ADDRESSEE: Patent Counsel
STREET: 10666 No. 5599790th Torrey Pines Road, TPC 8
CITY: La Jolla

Sequence 1, Application US/09912740A

Patent No. 6676940

GRERAL INFORMATION:
APPLICANT: Altieri, Dario C

APPLICANT: Languino, Lucia R

APPLICANT: Tanguino, Lucia R

APPLICANT: Tanguino, Lucia R

TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR INHIBITING

TITLE OF INVENTION: ENDOTHELIAL CELL AND FIBRINOGEN MEDIATED INFLAMMATION

TITLE OF INVENTION: ENDOTHELIAL CELL AND FIBRINOGEN MEDIATED INFLAMMATION

TITLE OF INVENTION: WINDER: US/09/912, 740A

CURRENT APPLICATION NUMBER: US 09/347,877

PRIOR FILING DATE: 1999-07-06

PRIOR FILING DATE: 1999-07-06

PRIOR APPLICATION NUMBER: US 08/139,562

PRIOR APPLICATION NUMBER: US 08/139,562

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
               GENERAL INFORMATION:
PATENT NO. 6737058
GENERAL INFORMATION:
PAPELICANT: Altieri, Dario C
APPLICANT: Altieri, Dario C
APPLICANT: Altieri, Dario C
APPLICANT: Thornton, George B
TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR INHIBITING
TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR INHIBITING
TITLE OF INVENTION: MEDOTHELIAL CELL AND FIBRINGGEN MEDIATED INFLAMMATION
FILE OF INVENTION: MEDATE: US/09/912,741B
CURRENT APPLICATION NUMBER: US/09/912,741B
CURRENT PILING DATE: 1999-07-06
PRIOR FILING DATE: 1996-01-06
PRIOR FILING DATE: 1996-01-12
PRIOR PELICATION NUMBER: US 08/139,562
PRIOR FILING DATE: 1993-04-25
PRIOR FILING DATE: 1991-01-19
PRIOR FILING DATE: 1991-01-19
PRIOR FILING DATE: 1992-06-12
PRIOR PELICATION NUMBER: US 07/898,117
PRIOR FILING DATE: 1992-06-12
PRIOR PELICATION NUMBER: US 07/898,117
PRIOR FILING DATE: 1992-06-12
PRIOR FILING DATE: 1992-06-12
PRIOR FILING DATE: 1992-06-12

Fatent No. 6025148

GENERAL INFORMATION:

APPLICANT: Grieninger, Gerd

APPLICANT: Grieninger, Gerd

APPLICANT: Cao, Yan

APPLICANT: Abadi, Mohamad Zaher

APPLICANT: Rudryk, Bohdam J.

TITLE OF INVENTY APPLICANTON: MONOSPECIFIC ANTIBODIES AGAINST A SUBUNIT OF FIBRINOGEN

FILE REFERENCE: Sequences 1-7 for 454-7 CON/CPA

CURRENT FILING DATE: 1997-07-01

EARLIER APPLICATION NUMBER: 08/479,755

EARLIER FILING DATE: 1995-06-07

SOFTWARE: Patentin Ver. 2.0

SOFTWARE: Patentin Ver. 2.0
                APPLICANT: Cao, Yan

Patent No. 6416963

GENERAL INFORMATION:
APPLICANT: Grieninger, Gerd
APPLICANT: Appleagre, Dianne
APPLICANT: Stoike-Steben, Lara
TITLE OF INVENTION: NOVEL CLEANED FRAGMENTS OF FIBRINOGEN
FILE REFERENCE: Sequence ID No. 6416963, 1-7 for 454-24
CURRENT APPLICATION NUMBER: US/09/373,157
CURRENT FILING DATE: 1999-08-12
NUMBER OF SEQ ID NOS: 7
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 3
LENGTH: 221
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match 44.0%; Score 51; DB 4; Length 221; Best Local Similarity 50.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
                엄
Patent No. 6380370

GENERAL INFORMATION:
APPLICANT: Lynn Doucette-Stamm et al
APPLICANT: Lynn Doucette-Stamm et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS
TITLE OF INVENTION: BPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPERBNICE: GTC-007
CURRENT PAPLICATION NUMBER: US/09/134,001C
CURRENT FILING DATE: 1998-08-13
PRIOR APPLICATION NUMBER: US 60/064,964
PRIOR FILING DATE: 1997-10-10
RIOR FILING DATE: 1997-10-10
RIOR FILING DATE: 1997-10-14
NUMBER OF SEQ ID NOS: 5674
SEQ ID NO 4880
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ;
